NIKOS LAZARIDIS

SOFTWARE DEVELOPER | BACKEND SYSTEMS · FULL STACK · AI APPLICATIONS

Greece | EU citizen | Remote across Europe | Open to relocation

nikosleft.github.io | github.com/nikosleft | LinkedIn | nikosleft@gmail.com

PROFILE

Software developer building local-first AI applications and backend systems across Android, web and desktop. Delivered agent-driven document editing, streaming APIs, local-model orchestration and real-time multiplayer services, backed by hands-on testing and production-style debugging.

SELECTED ENGINEERING PROJECTS

PRIVATE AI WRITER | TypeScript · React · Capacitor/Android · Express · llama.cpp · Vitest

- Built a local-first Android writing app connected to an authenticated Node.js/Express API and desktop-hosted llama.cpp inference.
- Integrated the Pi agent runtime with document search/read/patch tools, streamed tool events and resumable, structured Q&A workflows.
- Implemented revision safeguards, visible diffs, undo and automated tests for stale edits, cancellation and content restoration.

ANIMAHUB | Python · PWA · HTTP APIs · stable-diffusion.cpp · Vulkan

- Developed a mobile-friendly local-generation workspace with reusable prompt controls, presets, gallery output and model configuration.
- Orchestrated model-server processes, health checks, generation-state locking and cancellation; tuned execution for constrained AMD GPU memory.

EVOLUTION WAR | TypeScript · Phaser 3 · WebSockets · Cloudflare Durable Objects

- Engineered a server-authoritative real-time 1v1 backend with deterministic combat, reconnect handling and rematch flows.
- Implemented player-command validation, rate limiting and synchronized state broadcasts for consistent multiplayer matches.

CONTEXT NEXUS | Unreal Engine 5 · C++ · Clang 18 · LLM APIs

- Built an Unreal Editor assistant prototype translating Blueprint graphs into structured context and integrating Clang AST analysis of C++.

PROFESSIONAL EXPERIENCE

Independent Software Development | Jul 2025 – Present

- Designed and implemented end-to-end applications combining product interfaces, HTTP APIs, model integrations, real-time messaging and tests.

Teleperformance — Automotive Programs | Expert Team Specialist | Jan 2023 – Jul 2025

- Promoted to Level 2 Expert Team; typically handled ~30 escalations per shift across connected-car and EV services.
- Used Salesforce and internal diagnostic tools to analyze backend logs, reset service state and guide technical troubleshooting.

TECHNICAL SKILLS

Languages / backend TypeScript, JavaScript, Python, C++, Node.js, Express, HTTP/JSON APIs, WebSockets

AI / applications llama.cpp, LLM tool calling, OpenAI-compatible APIs, stable-diffusion.cpp, React, Capacitor, Vitest

Infrastructure / tools Cloudflare Workers / Durable Objects, Git, Unreal Engine 5, Clang AST

EDUCATION & LANGUAGES

Education University of Western Macedonia — Environmental Engineering studies (coursework)

Languages Greek (native) · English (C2) · German (B1)
