

Nikos Lazaridis

Software Developer | AI Applications & Backend Systems

Greece · EU citizen | nikosleft@gmail.com | github.com/nikosleft | linkedin.com/in/nikos-lazaridis-425840221 | nikosleft.github.io

PROFILE

Software developer focused on AI applications and backend systems. Since July 2025, I have built independent projects spanning local AI tools, backend integrations, image-generation workflows, and developer tooling. My previous experience in technical escalation informs my approach to systems debugging and communicating technical solutions.

EXPERIENCE

Independent AI & Software Development | July 2025 - Present

Built independent AI applications and developer tools spanning local-model integration, backend APIs, streaming workflows, automated testing, and systems debugging.

Teleperformance - Automotive Programs

Expert Team Specialist / Technical Support Specialist | January 2023 - July 2025

- Promoted to the Expert Team in 2023; typically handled about 30 Level 2 escalations per eight-hour shift, covering myAudi, in-vehicle MMI infotainment, connected services, and EV charging services.
- Used Salesforce and Audi's internal diagnostic tools daily to investigate backend logs, carry out system resets, and invalidate cached service data to resolve customer issues.
- Updated customer service packages directly, including infotainment and remote-control services accessed through myAudi.
- Provided phone agents and Audi dealers with detailed, step-by-step troubleshooting instructions and guidance on explaining technical issues and next steps to customers.
- Helped improve dialogue trees, internal procedures, and technical documentation to support frontline colleagues.
- Supported Mercedes-Benz roadside assistance by recording case details and coordinating assistance under pressure.

SELECTED PROJECTS

Private AI Writer - 2026

TypeScript · React · Capacitor/Android · Node.js · Express · llama.cpp · Vitest

A local-first AI document editor for private writing, combining an Android client, TypeScript/Express backend, and desktop-hosted llama.cpp inference.

- Built a guided Q&A workflow that pauses the assistant for multiple-choice or custom answers, then resumes document work with the user's responses and follow-up direction.
- Integrated the Pi coding-agent runtime with custom document search, read, and patch tools; added input validation, bounded retries, and streamed chat/tool events.
- Corrected conversation reconstruction across Q&A pauses to preserve context and enable prompt-cache reuse on resume.
- Added revision checks, undo, and automated tests covering document patches, stale revisions, cancellation, and restoration of original content.

AnimaHub - 2026

Python · HTTP APIs · llama.cpp · stable-diffusion.cpp · Progressive Web App

- Built a mobile-friendly interface and Python service connecting structured prompting controls to local language and image-generation models.
- Implemented model-server startup and health checks, generation-state locking, and cancellation through process restart, with model-specific runtime configuration.

Context Nexus - 2025

Unreal Engine 5 · C++ · Clang 18 · LLM APIs · Archived prototype

- Built an Unreal Editor prototype that translated Blueprint graphs into a compact AI-readable DSL describing nodes, pins, and connections.
- Integrated an external Clang 18 AST helper for Unreal C++ analysis, supporting project-context selection and in-editor LLM workflows.

Evolution War - 2026

TypeScript · Phaser 3 · WebSockets · Cloudflare Workers/Durable Objects

- Built private 1v1 matches with a server-authoritative simulation in Cloudflare Durable Objects, including deterministic combat, reconnect handling, and rematch flows.
- Validated and rate-limited client commands over WebSockets, then broadcast match-state snapshots to connected players.

RL Map Loader - 2026

Python · Tkinter · Windows

- Built a desktop utility for custom-map discovery and file replacement, with original-file backups, manual and exit-time restoration attempts, and an F3 overlay. Public repository: github.com/nikosleft/rl-map-loader

TECHNOLOGIES

AI applications and backend: TypeScript/JavaScript, Python, Node.js, Express, HTTP/JSON APIs, llama.cpp, LLM tool calling, OpenAI-compatible APIs, HTTP streaming, Vitest

Interfaces: React, Capacitor/Android, progressive web apps

Systems & tooling: Git, C++, Clang 18, Unreal Engine 5, WebSockets, Cloudflare Workers/Durable Objects

EDUCATION

University of Western Macedonia

Environmental Engineering coursework - degree not completed

LANGUAGES

Greek - Native · English - C2 · German - B1
